In Vaccine War, combat is in realtime, and you are a hero taking on your enemies and saving wounded allies. How to play: Your arrow is a weapon that you can fire at enemies as long as they are still on the battlefield. One of your weapons has limited ammo. A melee strike is only available if you manage to reach the enemy before they lock their shields. Each phase of the game has a different situation for the battlefield. When you hit an enemy, your attacks will

damage their body and damage their shield. You can also open lock boxes to find item and money rewards. You can upgrade your weapon to change their strength and to increase their ammo amount. Classes: There are 3 classes in the game: Healer, Tank and Combat. The main role of the Healer is to heal the wounded people. They have a bomb-type weapon that de-energize the enemies. The Tank can tank enemies and keep others from killing the healer. The Combat type has a powerful attack. They have an armor to protect them. Weapon Upgrades: You can upgrade the weapon with several parts. Each weapon is divided in 3 parts. There is a total of 18 different weapons in the game. Research: You can increase the stats of your weapon or armor by

researching them. You can also fight with different types of enemies for different bonuses and research points. Rewards: You will get one reward at the end of the mission after saving a number of people. The rewards will be rewarded according to your finishing time.
