JChem Suite 2022

JChem is a powerful suite for handling Chemistry research data. The bundle includes molecules, reactions, pathways, biological data and others. It provides an easy to use interface, includes pre-made scripts, and even allows for its own scripting language. Chemistry picture, concept and theory are included, as well as a general description of the chemical or chemical compound, a reaction, reaction products, macromolecules and macromolecular complexes. Theoretical and experimental data can be imported and exported directly from and to JChem. If you are a scientist, educator, or journalist and you need to quickly find a molecule, reaction, pathway, or other information in a Chemical Reaction Database, JChem is the place to start. All you need is to register yourself free and then begin to use the most powerful Chemical Reaction Database on the internet. Users can search the database using the following tools: Match Chemistry - or any of the FTS fields that JChem supports and uses to support the ACDL, PACD, BACD, and CACD (Molecules), CCD (Reactions and Run numbers), PCB (Pathways and Reactions), and BPCD (Biological information). Convert Chemistry - Convert any molecule into any other molecular format using any of JChem's converters, which are used with molecules, which are conformations, which are stereochemistry, which are substitution, which are name, which are code, which are elements, which are groups, which are isotopes, which are mixtures, which are annotations, which are formula, which are embed, which are sounds, which are polymers, and which are charge. Chemical Editor - A powerful editor that can display, edit, generate, and more. You can import and export any type of information, including molecules, elements, isotopes, reaction run, pathways, annotations, and much more. JChem does not depend on an external editor, but rather, JChem reads any file format it can (currently). An external editor will be offered as a separate plugin. Tools - Several tools to make your life easier when you are analyzing information in JChem. Chemical Structure Comparison - Quickly compare 2 or more chemical structures to quickly identify large groups of compounds by comparing their core structures. Chemical Stability - Has a Chemical Stability Calculator, which can be used to easily calculate the chemical stability of various chemical structures. Proteomics -
